

NIDHAANSAL

The procedural-intelligence layer for India

India Runs — Ideathon

Track 3 · Improve Everyday Life with AI

Context

Redrob Context & Ideathon Scope

Redrob AI is an India-first, AI-native ecosystem spanning hiring, productivity, communication, discovery, workflows, recommendations, automation, and intelligent user experiences.

This submission is built to extend that ecosystem:

Extend existing Redrob capabilities

into the procedures around work & identity

Improve experiences for Redrob users

jobseekers, graduates, gig workers, professionals

Introduce a new AI-native workflow

verified, source-traceable procedural guidance

Strengthen ecosystem engagement

a trust layer that keeps users inside the platform

Important

Not a new platform — a new layer on Redrob

This idea is not a standalone app built from scratch. It is a capability that lives inside and strengthens Redrob.

Leverages Redrob

verified-data DNA, multilingual reach, professional user base

Introduces new value

a living, source-traceable procedural-guidance layer

Strengthens the ecosystem

trust + stickiness as users manage their work identity

Why Redrob is uniquely positioned

it already helps Indians navigate broken systems with verified data

Problem Statement

Millions of Indians — especially those managing their professional identity — are locked out of the everyday procedures around work and life. The correct, current steps are public but unusable, so people overpay agents or rely on outdated advice that fails the moment a rule changes.

Public information isn't usable information

What everyday challenge are you addressing?

Completing routine procedures — updating your name across records, registrations, certificates. The correct process exists publicly but is buried in jargon, scattered, and changes without notice.

Who faces this challenge?

Every working Indian — and acutely, jobseekers, graduates, and gig workers whose professional identity depends on consistent, correct documents across employers, payroll, and banks.

Why does it matter?

People pay agents for free tasks, or trust word-of-mouth that's already outdated. The cost is money, time, and being misled — an information asymmetry that's used against them.

The information exists. It just isn't usable. That gap is what we close.

Nidhaansal — plain words in, verified steps out

What is your AI-powered idea?

You describe your situation in plain language. You get the correct, current, step-by-step procedure for your case — as simple as boiling water — with an honest “do it yourself or escalate” signal.

How does it solve the problem?

A living engine watches official sources for changes; a human verifies anything material; every step traces to its source. Not legal advice — procedural literacy you can trust.

How does it fit Redrob?

It starts with the work-identity procedures Redrob users already face, using Redrob's verified-data DNA and multilingual reach — then extends from career-navigation into life-navigation.

Why Redrob is uniquely positioned: Redrob already helps Indians “work around broken systems” with verified data. Nidhaansal is that same muscle, applied to the procedures of work and life.

Who benefits, and how their day changes

Who benefits?

The Redrob user managing their professional life: a fresh graduate, a jobseeker, a gig worker, someone changing jobs or going independent — anyone whose records must stay correct and consistent.

What challenges do they face today?

Name and document mismatches across PAN, Aadhaar, bank, and payroll. No idea of the correct process. Dependence on agents. Advice that's outdated the moment they act on it.

How does their experience improve?

They get one trustworthy, current path — and the confidence to act on it themselves. They stop overpaying, stop guessing, and can't be misled, because every step is source-backed.

One request, the whole chain mapped

1

Describe it in plain words

“I need my name consistent across all my work documents.”

2

File an affidavit

Notarised, on stamp paper.

3

Two newspaper ads

One English, one regional language.

4

Gazette notification

Your lifetime legal proof of the change.

Then the work-identity cascade

each its own mini-procedure — and each needed for employment & payroll

Aadhaar

PAN

Passport

Bank

What old advice misses: as of 2026, UIDAI caps name updates and requires the gazette notification for a full name change — the exact step outdated advice skips.

The cascade is the proof. Anyone can name step 1. Mapping the whole chain — current, verified, source-linked — is what a search or generic chatbot gets wrong.

AI for breadth. A human for trust.

LAYER 1 — AI MONITORING ENGINE

Watches public government sources

Detects when a procedure changes — impossible to do manually at scale.

LAYER 2 — HUMAN EXPERT VERIFIES

Certifies any material change

AI flags; a human confirms before it reaches a user.

LAYER 3 — USER INTERFACE

Plain steps + honest guidance

Shows steps, their source, and “do it yourself vs escalate.”

Why AI is essential here

India's procedures live across thousands of fragmented, constantly-shifting official sources. **No human team can watch them all.** AI does breadth at impossible scale; the human does the judgment that earns trust. AI concentrates expertise — it doesn't replace it.

Built for how India actually lives

How can diverse users benefit?

Plain-language input means no legal vocabulary is required.
Multilingual support (aligned with Redrob's 30+ Indian languages) reaches first-generation professionals and tier-2/3 users who are most often excluded and most often overcharged.

How does it stay accessible and easy to adopt?

It lives inside a platform users already use for work — no new app to learn. The honest “do it yourself vs escalate” signal meets people where they are, and source-traceability builds trust without demanding expertise.

Value for users, communities, and Redrob

What positive change could this create?

People stop overpaying agents for tasks that are essentially free, stop losing weeks to confusion, and stop being misled — reclaiming time, money, and dignity.

How do users benefit?

A verified, current path they can act on with confidence. Self-reliance instead of dependence. The information asymmetry that's used against them simply disappears.

How do Redrob & its communities benefit?

A powerful trust-and-utility layer that deepens engagement and stickiness — and extends Redrob from career-navigation into the broader life of its users.

From work-identity to all of civic life

Start with the procedures around work and identity. Extend the same verified engine across India's civic life — the procedural-intelligence layer for everything.

Work & identity

Registrations

Transfers

Certificates

All civic life

We can't make the government faster.

We make sure you walk in knowing exactly what to do — so the process can't be used against you.

APPENDIX

Supporting material

Architecture · the work-identity cascade · product mockups · sources

How the system works

Citizen describes a situation in plain language

INPUT

Public government sources

Gazettes, department portals, fee & form changes.

LAYER 1 — AI MONITORING ENGINE

Watches a curated watchlist, detects change

Narrow 'diff and classify' — not crawling the whole internet.

LAYER 2 — HUMAN EXPERT

Verifies & certifies material change

AI flags; a human confirms before anything reaches a user.

LAYER 3 — USER INTERFACE

Plain steps, source-linked, honest guidance

'Do it yourself vs escalate' — every step traces to its source.

The moat

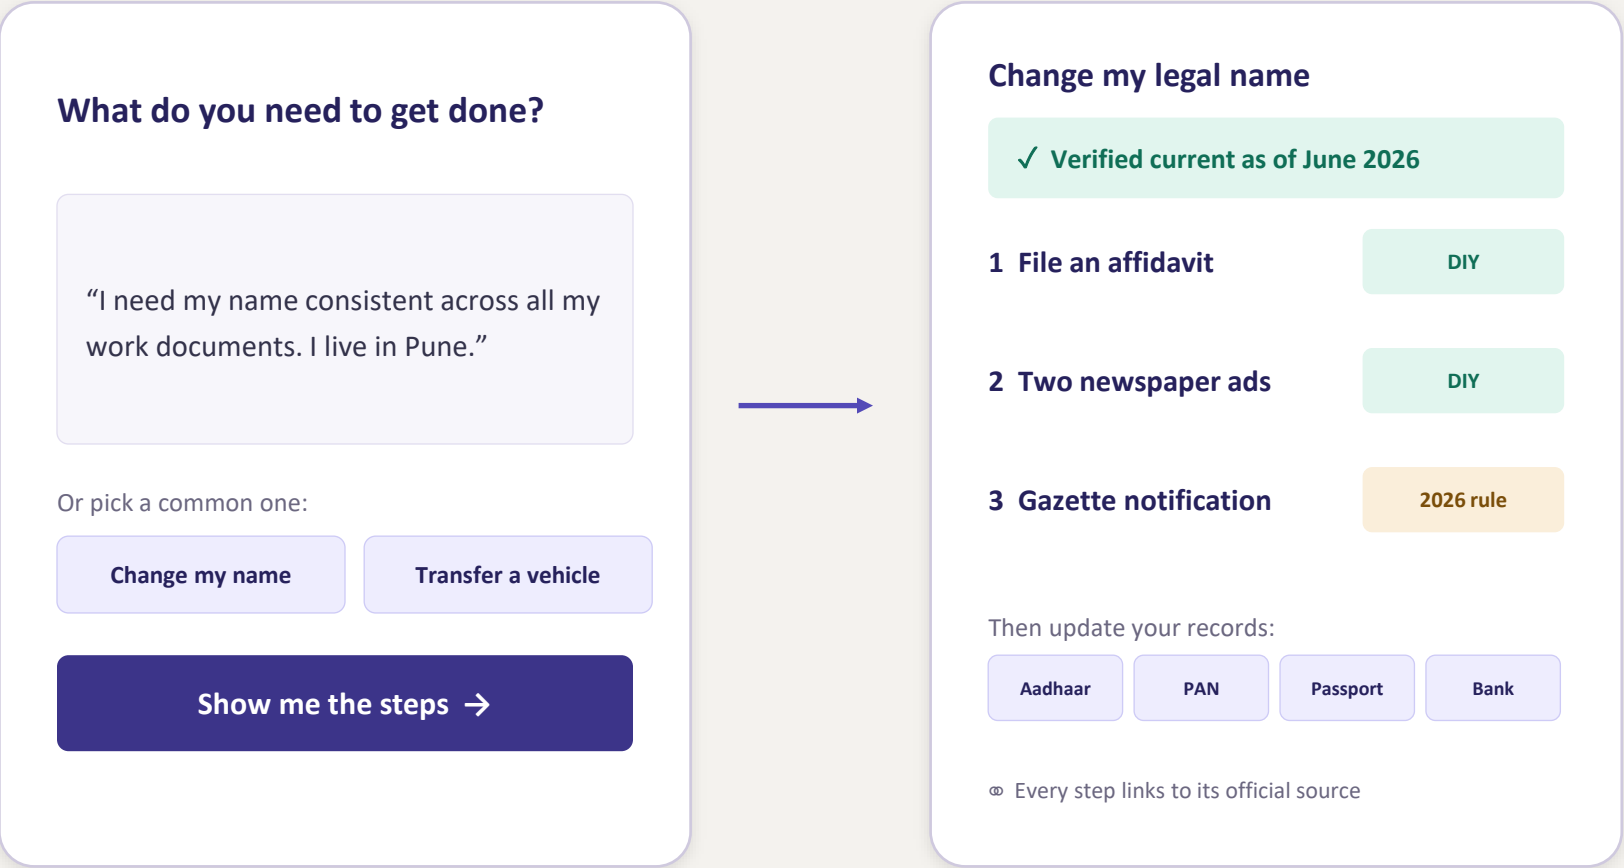

Living verification keeps it current.

Source-traceability makes it trusted.

Accumulated knowledge compounds over time.

What a generic chatbot fundamentally can't guarantee.

What the user sees

1 · Describe it

2 · Get verified steps

Sources & positioning

The procedure facts in this deck are anchored to authoritative sources — the same sources the system itself would verify against:

UIDAI (uidai.gov.in)	2026 name-update cap + gazette requirement for full name change
Gazette of India (egazette.gov.in)	Gazette notification — the lifetime legal proof of name change
Department of Publication	Change-of-name procedure & document requirements

Where we sit: others build the law layer (legal research) and the lawyer layer (marketplaces). The administrative-procedure layer — where citizens actually get stuck — is underserved. That's our space.
